

Reach every child. Plan every session. VaxPlan is a mobile-first, offline-capable platform that takes an immunization program from a map of its facilities all the way to a vaccinator's daily itinerary — and back up to a live national coverage dashboard. Built on the WHO RED and Gavi RED-Q strategies.

THE PROBLEM

Every year millions of children miss life-saving vaccines — not because vaccines don't exist, but because **planning breaks down at the last mile**. Zero-dose children live in communities that are never reliably mapped; microplans sit in disconnected spreadsheets; denominators are guesswork; and field teams work offline with tools that assume constant internet.

WHAT VAXPLAN DOES

- | | |
|--|---|
|  Maps & GIS
Every facility, community & catchment, with automatic overlap detection. |  Equity targeting
Find zero-dose & hard-to-reach children and missed settlements. |
|  Real denominators
Census, HMIS, WorldPop & community data with target cohorts. |  Needs & budgets
Doses, vials, syringes, safety boxes & wastage, calculated automatically. |
|  Microplanning
Guided RED / RED-Q wizard for routine programs and campaigns. |  Field execution
Daily itineraries, session capture, defaulters & client logbook. |
|  Live analytics
Coverage, dropout, zero-dose & supervision in real time. |  Offline-first
Full functionality with no internet; auto-sync when back online. |

MULTI-COUNTRY

One secure platform multiple Ministries use independently, with strict per-country data isolation.

INTEROPERABLE

DHIS2 & FHIR R4 adapters connect to existing national health information systems.

TRUSTED

Role-based access, geographic scoping & full audit logging — auditable end to end.

Built on open foundations & global standards: OpenStreetMap, geoBoundaries, WorldPop, GRID3, UN OCHA/HDX · WHO, UNICEF, Gavi, PAHO & CDC immunization guidance · DHIS2 & FHIR R4.

I'm looking for partners. This is an independent initiative, and I want it to help programs reach more children.

Open to: Ministries of Health & EPI teams for pilots · NGOs implementing immunization · global-health funders · fellow digital-health builders.

**Reach every
child.**
